Re. WT Docket No. 11-49

I am the General Manager of PCS-WIN a Wireless ISP in Eastern Indiana. We service many homes and business with high speed internet delivered in the unlicensed 900Mhz band.

The Wireless Internet Service Provider Association (WISPA) recently conducted tests to see if the Progeny service would affect the services that we offer. In those tests that Progeny claims there would be no affect to other services, WISPA proved that the Progeny service would have a detrimental effect on the service that we offer.

We have several areas that 900Mhz is our only option and to have that made unavailable due to another companies poor planning and testing is not acceptable.

Allowing Progeny to use these frequencies would hurt many WISP customer across the nation.

Steve Barnes
GM
